Cornell University’s Summer College offers serious, research-focused students the rare opportunity to join a top-notch laboratory at one of the world’s leading research institutions.

During Cornell’s acclaimed RABS program, students live, learn, and play on the Cornell campus while:

- studying under the guidance of distinguished Cornell faculty members,
- performing intensive, full-time research in an area of their choosing,
- developing research skills,
- working in cutting-edge facilities,
- earning six college credits and a Cornell transcript, and
- exploring academic and career options.

RABS is highly competitive. Enrollment is limited. Successful candidates must have a demonstrated interest in biological research. Apply early for the best lab placements!
